2.	ELEC_RC2	Dr. H. T. Jadhav Mr. VRSV Bharath Pulavarthi Pradip Bamane	When : The Scientific Secrets of Perfect Timing	Daniel H. Pink	<ul style="list-style-type: none"> Those people who think time is not important, there is no such perfect timing and the is facing difficulty with task management are person who suggested to read The book WHEN: the scientific study of perfect timing. This book gives a scientific approach for students, teachers, researchers and industrialists etc. to get benefit by understanding productive and unproductive time periods during a day with the information of biological clock and performance curve of early riser and late night worker. There are three T's suggested in the book and that are Identify type, identify the task and identify time. Identify the chronotype: Depending upon a person who is early riser or late night worker, the author suggested the person to complete day wise work by understanding his biological clock. The author suggested to sum up the whole work and Identify the tasks and group them into logical and insight tasks, and to analyze progress he also suggested to make checklist of entire activities. Identify proper time to complete the logical and insight tasks according to chronotype of a person. The author suggested to complete logical task during peak period and insight tasks during rebound period.
